

Environmental consciousness and sustainability and Divyangjan friendly initiative

1. Alternative sources of energy

- Solar energy: solar light stand, solar panels are installed in the campus for energy conservation.
- Use of LED bulbs/power-efficient equipment

Use of LED lights in the College office

Solar lights installed in and around the college campus

Go green power saver generator is installed in the college campus along with the transformer for safety.

Two Solar panel Installed for generating electricity

Power Saver Equipment's installed in the Principal cabin and other administration department.

2. Management of various types of degradable and non-degradable waste:

The institution's Green Campus Policy provides guidelines regarding the management of degradable and nondegradable waste. Every member of the institution diligently works towards making the campus clean and green. Waste management is taken up in earnest and is considered a primary step toward campus sustainability.

- Solid waste management: The solid waste generated on the campus majorly comprises paper. The remaining solid waste is categorized into three: dry waste, wet waste, and non-biodegradable waste which are processed further. Separate, color-coded bins for each is placed at several locations within the building and outside, including the canteen area. Scrap metal is recycled through vendors. The college community is concertized during orientation on reducing waste and avoiding plastic. Also, some awareness initiatives are taken like "one-day eco-friendly camp, plastics free campus. Classrooms and other academic spaces have waste bins.

Solid Waste Management installed in the girl's restroom

Dry and Wet bins installed in every floor

- Liquid waste management: Liquid waste or as it is generally called, wastewater, is potentially harmful to human health and the environment. The liquid waste is directed to a septic tank constructed for the purpose and is further released into the corporation sewage system. “Don’t waste water” awareness was created through boards installed near water filters, washbasins, and restrooms.
- E-waste management: The institution has ensured timely and effective maintenance of IT infrastructure and ensures an increased lifespan of electronic equipment. The institute has four computer lab and 1 electronics lab along with one printing lab. Also, institute has two ICT smart classes. Some electronic and electrical equipment are refurbished and reused. The college periodically disposes off the unserviceable electronic and electrical equipment through safe means. E- Waste mainly comprises of depreciated computer systems and devices including UPS, printers, scanners, monitors, etc. A bin is placed strategically in each lab as a collection point and the waste is disposed to the e-cycle.

3. Water conservation facilities available in the Institution:

- Rainwater harvesting
- Borewell /Open well recharge
- Construction of tanks and bunds
- Maintenance of water bodies and distribution systems on the campus.

Rain water maintenance tank installed

Bore-well

in the backyard of the campus.

4. Green campus initiatives

- Pedestrian Friendly pathways

- Landscaping with trees and plants.
- Encouraging the use of public transport.
- Programmes like “plastic-free campus”, “one day eco friendly camp generate awareness on waste management practices in educational institutions around and in the neighbouring communities.

“Swacha Bharat Abhiyan”

Save Soil event was organized in collaboration with the Save Soil organization, to promote environment consciousness on the Soil Day, 12/05/2022. The event included all the students of ASM Group of Institute. The event was called “Walk for Soil.”
