Subject: Request for permission for industrial visit

Dear Sir/Madam,

With reference to the above subject we would like to request for permission to conduct an industrial visit at your company. We wish to undertake an industrial visit at your company on 04/05/22 (date) 10.00am (time) 1.00pm to acquire practical knowledge in _____. Our academic curriculum focuses on engaging students in practical experiences to observe the implementation of what they are taught in theory. We believe that your company will give our students relevant knowledge during this visit.

A group of/individual Four student/s in SY BBA-IB year and — faculty Members intend to participate in this industrial visit. Please allow us to conduct an industrial visit to your company. The information provided by the company officers will be used for academic purpose only.

During visit the students and teachers will follow the rules and regulations of the industry.

Thank you in advance.

Yours faithfully,

College of Comm. & Sc. Science & Information Tech. C.S.I.T. Pune - 18. Pimpri

To,

Ms. Pratiksha Patil

Pune

Subject –Offer Letter

Dear Pratiksha Patil,

We are pleased to offer you the position of "Software Developer" with Technocia Infotech, hereinafter referred to as 'company'. This role will provide you with the opportunity to work in a dynamic organization and evolve as a part of a creative team. We expect you to be ambitious, and to display a high level of enthusiasm and curiosity to learn new things.

You are expected to gain substantial domain knowledge and understanding over the period of the next 6 months. You may need to generate ad-hoc business intelligence reports from time to time from multiple data analysis, and will have to become a powerful in the given domain.

The roles and responsibilities for the post will be indicative and depending on your strengths and interests as well as the evolving organizational needs, the roles and responsibilities are subject to change. It should be noted that your responsibilities might require working irregular hours, weekends and/or public holidays as per project needs. The company reserves the right to change the working hours as and when business requirements change.

You are expected to maintain utmost confidentiality in regard to the affairs of the company and shall keep confidential any information, instrument, document etc., relating to the company or company client that may come to your professional knowledge as an employee.

During your tenure at Technocia Infotech, you will not engage in or hold interest in any business or trade or undertake any other employment. If any such interest exists, or likely to come up in the near future, you are expected to make a full disclosure before accepting this offer letter. Post your tenure with the company, you agree that you will not solicit or deal directly or indirectly with any clients of the company.

Upon acceptance of this offer letter, you will be required to execute an employment agreement with the company, detailing the terms and conditions of your employment. This position is based at our office location in the Pune but could involve occasional travel as per project requirements.

Compensation:

During probation period you will be given no compensation. Post completion of probation period company will offer you suitable position based on performance.

Designation	Software Developer
Joining Date	04th April, 2022
Notice Period (During Probation)	15 Days

Undertaking

1. I, Pratiksha Patil, undertake that there are no claims of damages or legal actions of any nature against me for criminal activity, misappropriation of funds, undertaking dual profession, claims on loss or damages to company property, harassment of co-workers etc.
2. I, Pratiksha Patil, undertake that I have not been involved in drug abuse & have not been suffering problems with alcoholism, and that I do not suffer from any medical problems that my interfere with the performance of my duties.
3. I, Pratiksha Patil, confirm that any such history or information as above have been adequately declare to the company in writing prior to accepting this offer, and also that all information provided is correct to the best of my knowledge and understanding.

Candidate Name	Pratiksha Patil
Candidate Signature	Patil
Date of Undertaking	

Acceptance

I accept the offer with above mentioned details.

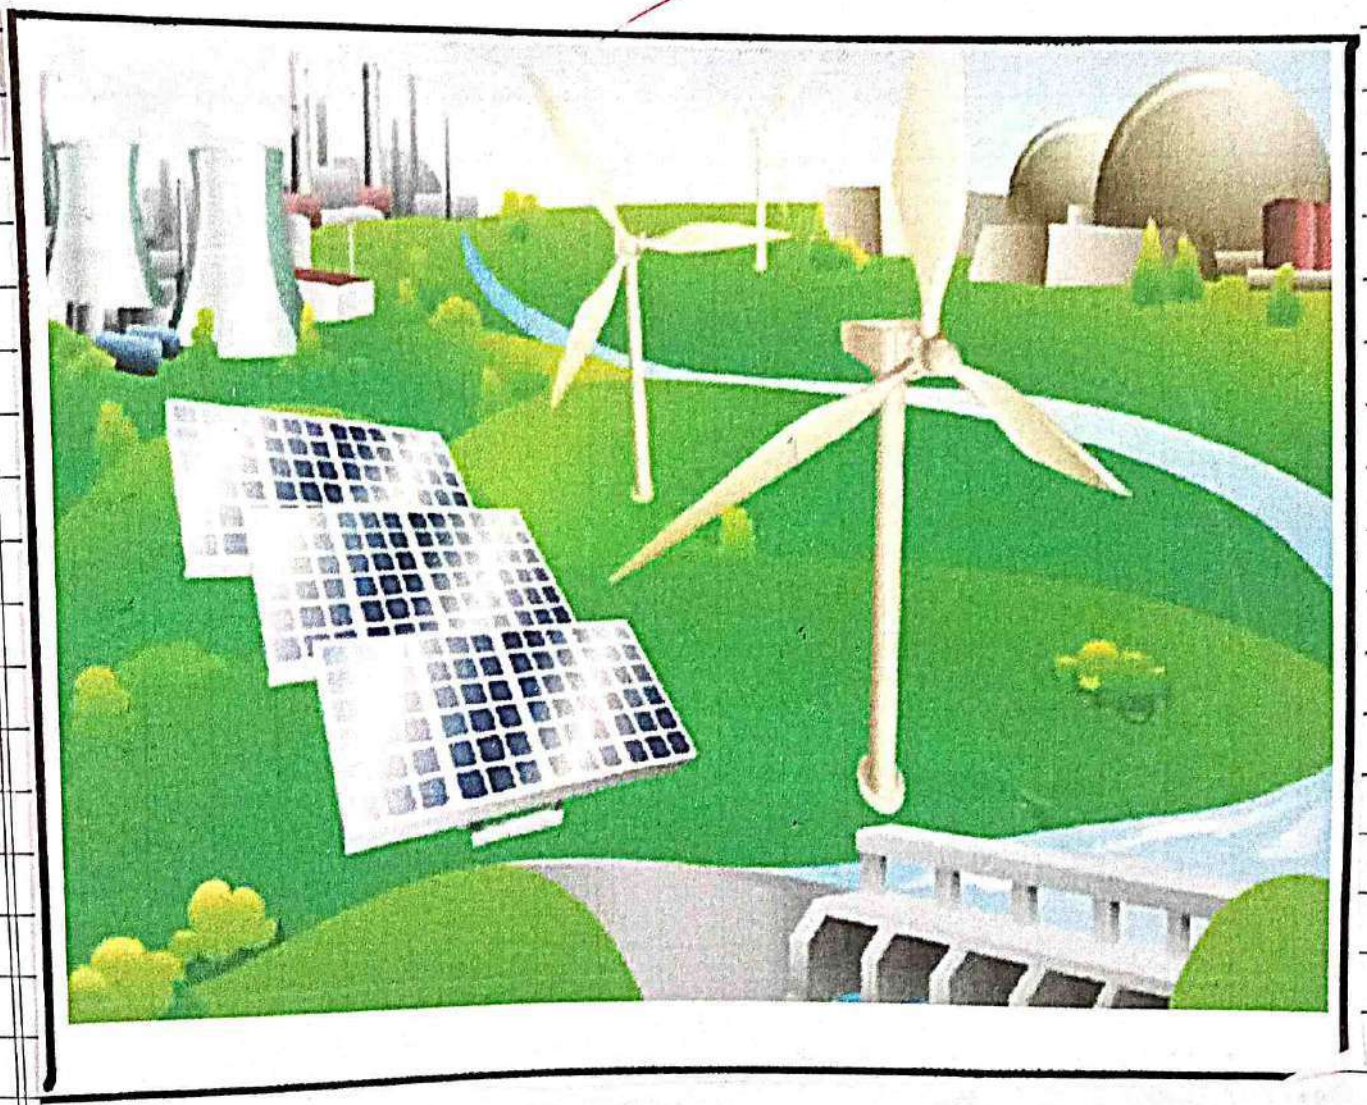
ENERGY RESOURCES : INDIAN SCENARIO



Page :
Date : / /

Energy Resources : Indian Scenario.

1) Introduction :=

Energy Can be defined in a number of ways. In the broad sense, energy means the Capacity of Something – a person, an animal, or a physical system (machine) – to do works and produce change. It Can be used to describe someone doing energetic things such as running, talking and acting in a lively and vigorous way. It is used in science to do describe the part of the market where energy itself is harnessed and sold to Consumers.

Today, energy is the primary input for almost all economic activities and has become vital for improvement in the quality of life. Infact the whole infrastructure rests upon energy. The energy Consumption of a nation now-a-day is usually Considered as index of its development. About 24 percent of energy Consumed globally, is used for transportation, 40 percent for industries, 30 percent for domestic and Commercial purposes and the rest 6 percent for other uses including agriculture.

There is a wide disparity in energy Consumption in developed and industrialized Countries and developing Countries. About 2 billion people, one third of global population.

Sponsors: Whisper India, Venus

Date and Time: 20/05/2022, 11:00 am

Venue: Auditorium Hall on the College Premises

Guest: Dr Ravindra(Gynecologists)

Detailed Report:

The Seminar was organized for girls' students on a very sensitive topic i.e. menstrual issues and related problems. The guest highlighted the different hormonal issues and their behavior in every cycle. He also showed a small AV on society's view on this topic and how it is an underrated topic in society.

This seminar will be beneficial to students in Personal and Professional areas.

The program concluded with a question and session with Dr. Ravindra. He answers all the questions of the students, faculties, and non-teaching staff.

Gift hampers were distributed by the Sponsors of the Program Whisper India, Venus.

The Program Proved beneficial to all the girls of the College.

ACCOUNTING TRANSACTIONS AND FINAL ACCOUNTS

TOPIC -2

VOUCHER SYSTEM

Any written documentation supporting the entries reported in the account books, indicating the transaction's accounting accuracy, can be referred to as a voucher. For example, a bill, invoice, receipt, salary and wages sheet, pay-in-slip counterfoil, cheque book counterfoil, or trust deed.

A voucher is a redeemable form of transaction bond that is worth a particular monetary value and can only be used on specific grounds or specific goods. Examples of this include vouchers for lodging, transportation, and food.

Accounting Voucher

A voucher is created once we have received the invoice from a supplier. It has to be stamped as "paid" when a cheque or digital payment is made to a supplier and is then archived along with any supporting documents.

A mechanism called a "payment run" is performed in account payable systems to produce payments that correspond to the unpaid vouchers. The voucher can be used in accounts receivable to adjust an account. Also, the voucher can be used to adjust the accounts under general ledger, and it is called as a journal voucher.

Components of Voucher

This is most commonly found in a manual payment scheme, in which it is part of the control mechanism. A voucher usually contains the following information:

- Supplier identification number
- The amount payable
- The date on which payment will be made
- The accounts payable to record the liability
- Any valid early payment discount terms
- The approval signature or stamp

Benefits

The following are a few benefits of maintaining vouchers:

- Vouchers are useful to retain better control over the payables process.
- Many invoices can be paid at once, thereby reducing the number of cheques.
- It can be pre-numbered and simplifies the payables audit trail.
- Invoice approval is segregated from invoice payment, both for optimising productivity, making it easier to plan.
- Collection of invoices shall be made by the cashier, who shall report to the treasurer.

- **Internal-Voucher:**

These are the vouchers which are used for internal use of organisation, like for transfer of goods from one branch to another of the same organisation.

These also comprise of the vouchers which are prepared for some expenses for which no invoice or receipt is provided. It includes vouchers for auto fare, cab fare, purchase from hawkers, etc.

- **External-Voucher:**

It is the document received from outside party for a business transaction.

It includes vouchers and receipts provided from the seller of shops like bill for stationery, electricity bills, receipt of rent paid, etc.

TYPES OF VOUCHERS

(i) Receipt Voucher:

A Receipt voucher is used to record cash or bank receipt. Receipt vouchers are of two types which are as follows:

(a) Cash receipt voucher – it denotes receipt of cash in hand.

(b) Bank receipt voucher – it indicates receipt of a cheque or demand draft i.e. money is not received in the form of cash in hand, instead, the money will be credited to the bank account of the assessee.

(ii) Payment Voucher:

A payment voucher is just the opposite of a cash voucher. In the above, cash/ bank was debited, while in this case, cash or bank will be credited. In the above case, there was an inflow of funds, while in this case, there is an outflow of funds. A Payment voucher is used to record a payment of cash or cheque. Payment vouchers are also of two types which are:

(a) Cash Payment voucher – it denotes payment of cash

(b) Bank Payment voucher – it indicates payment by cheque or demand draft i.e. money is not paid in the form of cash in hand, instead, the money will be debited from the bank account of the assesse

(iii) Non Cash Or Transfer Voucher or Journal Voucher:

These vouchers are used for non-cash transactions, they are basically used as a documentary evidence. e.g., Goods sold on credit. In such cases, the cash or the bank account of the assessee is unaffected. In the case of Goods sold on credit, the Voucher would debit the Debtor to whom the goods are sold on credit, while sales on credit account would be credited further.

(iv) Supporting Vouchers:

These vouchers are the documentary evidence of transactions that have happened. For example, you can attach the bill of an expense along with the original voucher just to further support the primary voucher. Petrol Bills attached with the conveyance vouchers are a good example of Supporting Vouchers.

CASH PAYMENT VOUCHER

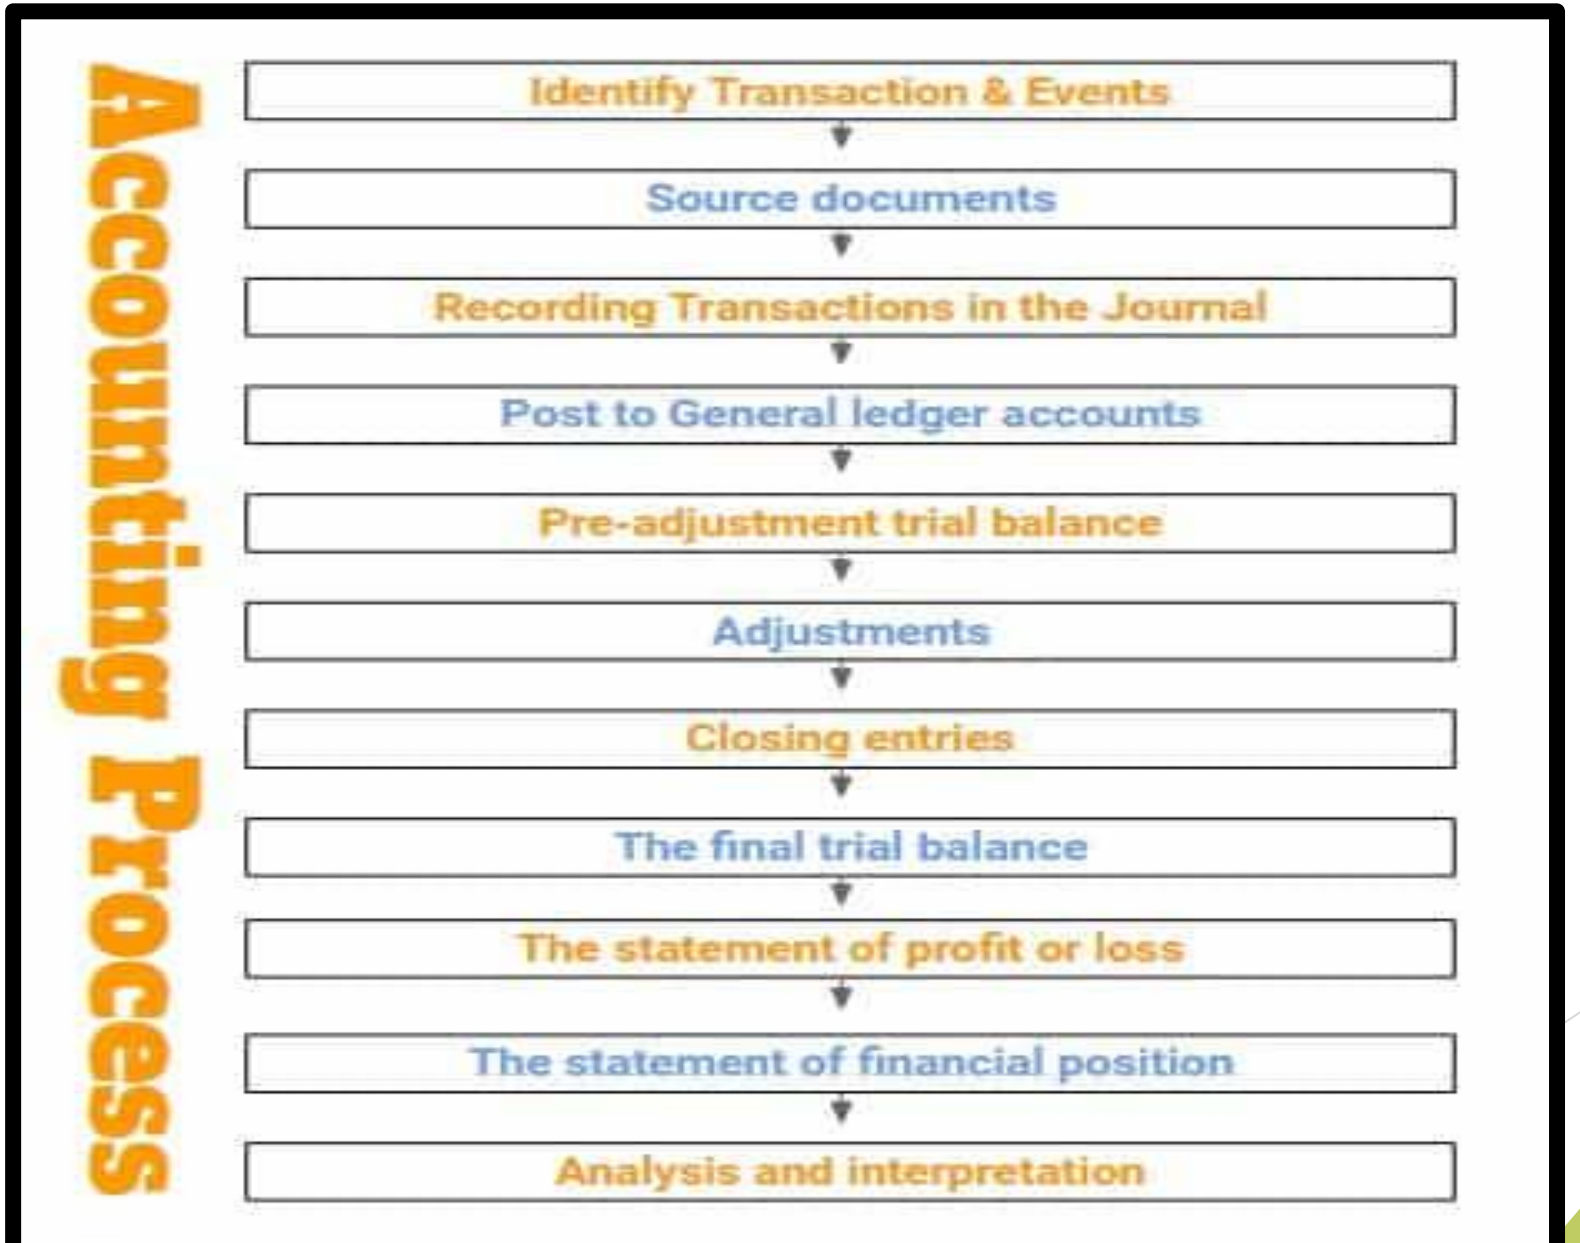
Accounting Process



JOURNAL

- The word journal comes from the French word "Jour" meaning "day". It is a book of original or prime entry written up from the various source documents. Journal is a primary book for recording the day to day transactions in a chronological order i.e. in the order in which they occur. The journal is a form of diary for business transactions. This is also called the book of first entry since every transaction is recorded firstly in the journal.

Format Of A Journal

Date	Particulars	L.F.	Debit (Rs.)	Credit (Rs.)

IMPORTANT CONSIDERATIONS FOR RECORDING THE BUSINESS TRANSACTIONS

1. **Trade Discount**

Trade discount is usually allowed on the list price of the goods. It may be allowed by producer to wholesaler and by wholesaler to retailer for purchase of goods in large quantity. It is not recorded in the books of account and entry is made only with the net amount paid or received.

For example

purchased goods of list price Rs. 8,000 at 15% trade discount from X. In this case the following entry will be passed :

		Rs.	Rs.
Purchases Account	Dr.	6,800	
To X			6,800

(Being goods purchased at 15% trade discount less list price)

2. **Cash Discount**

Cash discount is a concession allowed by seller to buyer to encourage him to make early cash payment. It is a Nominal Account. The person who allows discount, treat it as an expense and debits in his books and it is called discount allowed and the person who receives discount, treat it as an income and it is called discount received and credited in his books of account as "Discount Received Account."

For example,

X owes Rs. 6,000 to Y. He pays Rs. 5,950 in full settlement against the amount due. In the books of X, the journal entry will be :

		Rs.	Rs.
Y	Dr.	6,000	
To Cash Account			5,950
To Discount Received account			50

(Being Cash paid and discount received)

In the books of Y

		Rs.	Rs.
Cash Account	Dr.	5,950	
Discount Allowed Account	Dr.	50	
To X			6,000

(Being cash received and discount allowed)

3. Goods distributed as free samples

Sometimes business distribute goods as free samples for the purpose of advertisement. In this case, Advertisement Account is debited and Purchases Account is credited.

For example,

Goods costing Rs. 8000 were distributed as free sample. To record this transaction following entry will be passed:

Advertisement Account	**Dr.**	**8,000**	
To Purchases Account			**8,000**

4. **Interest on capital**

Interest paid on capital is an expense. Therefore interest account should be debited. On the other hand the capital of the business increases. So the capital account should be credited. The entry will be as follows:

Interest on Capital Account Dr.

To Capital Account

5. Interest charged on Drawings

If the interest is charged on drawings then it will be an increase in the income of business, so interest on drawings will be credited. On the other hand there will be increase in drawings or decrease in Capital. So Drawings Account will be debited. To record this, following entry will be passed:

Drawing Account/Capital Account Dr.

To Interest on Drawing Account

6. Depreciation charged on Fixed Assets

Depreciation is the gradual, permanent decrease in the value of an asset due to wear and tear and many other causes.

Depreciation is an expense so the following entry will be passed:

Depreciation Account Dr.

To Asset Account

7. Bad Debts

Sometimes a debtor of business fails to pay the amount due from him. Reasons may be many e.g. he may become insolvent or he may die. Such irrecoverable amount is a loss to the business. To record this following entry will be passed :

Bad Debts Account Dr.

To Debtor's Account

8. Bad Debts Recovered

When any amount becomes irrecoverable from any costumer or debtor his account is closed in the books. If in future any amount is recovered from him then his personal account will not be credited because that does not exist in the books. So the following entry is passed :

Cash Account Dr.

To Bad Debts Recovered Account

9. Purchase and Sale of investment

When business has some surplus money it may invest this amount is shares, debentures or other types of securities. When these securities are purchased, these are recorded at the purchase price paid. At the time of sale of investment the sale price of an investment is recorded in the books of accounts.

The following entry is passed to record the purchase of investment :

Investment Account Dr.

To Cash Account

In case of sale of these securities the entry will be :

Cash Account Dr.

To Investment Account

10. Loss of Goods by Fire/Accident/theft

A business may suffer loss of goods on account of fire, theft or accident. It is a business loss and a nominal account. It also reduces the goods at cost price, and increases the loss / expenses of the business. The entry will be passed as :

Loss by fire/Accident/theft Account Dr.(for loss)

Insurance Company Account Dr. (for insurance claim admitted)

To Purchases Account

11. Income Tax Paid

Income Tax paid should be debited to Capital Account or Drawings Account and credited to Cash Account in case of sole proprietorship and partnership firms. The reason behind this is that income tax is a personal expense for the sole trader and partners because it is paid on income of proprietor. The entry will be as follows :

Capital Account/Drawing Account Dr.

To Cash Account

12. Bank Charges

Bank provide various services to their customers. Bank deducts some charges by debiting the account of customers. It is an expense for the business. To record this, Bank charges account is debited and bank account is credited in the books of customer.

13. Drawings Account

It is a personal account of the proprietor. When the businessman withdraws cash or goods from the business for his personal/domestic use it is called as 'drawings'. Drawings reduce the capital as well as goods/cash balance of the business. The journal entry is :

Drawings Account Dr.

To Cash Account

To Purchases Account

14. Personal expenses of the proprietor

When the private expenses such as life insurance premium, income tax, home telephone bill, tuition fees of the son of the proprietor etc. are paid out of the cash or bank account of business it should be debited to the Drawings Account of the proprietor.

15. Sale of Asset/Property

When the asset of a business is sold, there may occur a profit or loss on its sale. Its journal entry is :

(i) In case there is a profit on sale of Property/Assets

Cash/Bank Account Dr.

To Asset/Property Account

To Profit on sale of Asset Account

(ii) In case of a loss on sale of asset

Cash/Bank Account Dr.

Loss on sale of Asset Account Dr.

To Asset Account

Study Materials

C++ Basics

C ++ is an object oriented programming language, C ++ was developed by Bjarney Stroustrup at AT & T Bell lab, USA in early eighties. C ++ was developed from c and simula 67 language. C ++ was early called 'C with classes'.

Program

```
#include <iostream.h>
int main ()
{
        cout << "Hello World!";
        return 0;
}
```

Output

Hello World!

Output Operator

For displaying data on the standard output device the cout stream object is used.
It is predefined object of the “ostream” class.
It is used with insertion operator “<<” which inserts data into the output stream.
Syntax
cout<<data;
The << operator is known as insertion operator since it inserts the data that follows it into the stream that precedes it.
The data to be inserted into the output stream can be a variable name, constants or an expression.
Examples
cout<< “hello”;
cout<<a+b;
cout<<factorial(n);

Input Operator

The standard input stream object is cin which is used to read data from a standard input device like keyboard.
It is predefined object of the “istream” class.
It is used with extraction operator “>>”.
This must be followed by the variable name that will store the value being read from the stream.
Syntax
cin>>variable;
The operator >> is known as get from operator or extraction operator.

Example
cin>>n;

Reference Variables

- Reference variable is a new name given to an existing variable.
- It provides an alias (alternative name) for a previously defined variables.
- **Syntax**

datatype &reference variable name= variable name

- Example :- **int total=100;**
  int &sum=total;
- A reference variable must be initialized at the time of declaration. This establishes the correspondence between the reference and the data objects which it names.
- When we create a reference variable, we are not creating a new variable, that is no memory is allocated to the reference variable.
- The original name and reference name both refer to the same memory location.
- The value can be accessed using both, the original variable name as well as reference name.
- The value can be changed using either the original name as well as reference name.
- If any one of the two variable change than it will affect the other.

Program

```
#include<iostream.h>
#include<conio.h>
int main()
{
        float total=10;
        float &sum=total;
        cout<<"\n total="<<total;
        cout<<"\n sum="<<sum;
        total=total+1;
        cout<<"\n total="<<total;
        cout<<"\n sum="<<sum;
        sum=0;
        cout<<"\n total="<<total;
        cout<<"\n sum="<<sum;
        getch();
        return 0;
}
```

Operators in C++

C++ has a rich set of operators. All C operators are valid in C++ also. In addition to that C++ introduces some new operators. We have already seen two such operators namely, the insertion operator <>. Other new operators are:

Operator	Name of Operator	Function
::	Scope Resolution operator	To access global version of a variable
::*	pointer-to-member declarator	To declare a pointer to a member of a class
->*	pointer-to-member operator	To access a member using a pointer to the object and a pointer to that member.
.*	pointer-to-member operator	To access a member using object name and a pointer to that member.
new	Memory allocation operator	To allocate memory for object.
delete	Memory release operator	To free allocated memory of an object.
endl	Line feed operator	To insert a new line character similar to '\n'
setw	Field width operator	To sets the field width to be used on output operations.

Scope Resolution operator

C++ is also a block structured language.
Blocks and scopes can be used in constructing program
Same variable name can be used to have different meaning in different blocks.
The scope of the variable extends from the point of its declaration till the end of the block containing the declaration
A variable declared inside a block is said to be local to that block.

```
int x;
main()
{
    int x=10;                    Block 1
     -------
     -------
    {
        int x=1;          Block 2
         ------
    }
}
```

Block 2 is contained in block 1. Declaration in inner block hides a declaration of the same variable in an outer block and therefore each declaration of x causes it to refer to a different data object.
In C the global version of a variable cannot be accessed from within the inner block.
C++ resolves this problem by introducing a new operator :: called the scope resolution operator.

Syntax

:: variable name

This operator allows access to the global version of a variable.

Program

```
#include<iostream.h>
#include<conio.h>
int m=10;
int main()
{
        int m=20;
        {
                int k=::m;
                int m=30;
                cout<<"we are in inner block";
                cout<<"\n k="<<k;
                cout<<"\n m="<<m";
                cout<<"\n ::m="<<::m;
        }
        cout<<"\n we are in outer block";
        cout<<"\n m="<<m;
        cout<<"\n ::m="<<::m;
        getch();
        return 0;
}
```

Output

```
 we are in inner block
        k=20
        m=30
        ::m=10
 we are in outer block
        m=20
        ::m=10
```

In the above program , the variable m is declared at 3 places namely outside the main() function, inside the main() and inside the inner block.

Memory management operator (new, delete)

- C uses malloc() and calloc() function to allocate memory dynamically at run-time. Similarly it uses the function free to free dynamically allocated memory.
- We use dynamic allocation technique when it is not known in advance how much of memory space is needed.
- C++ also supports these functions but it also defines two unary operator new and delete that perform the task of allocating and freeing the memory in a better and easier way.
- Since these operators manipulate memory on the free store, they are also known as free store operator.
- An object can be created by using new and destroyed by using delete as and when required.
- A data object created inside a block with new, will remain in existence until it is explicitly destroyed by using delete.
- Thus lifetime of an object is directly under our control.
- The new operator can be used to create objects of any type
- Syntax: pointer variable=new data type
- Here pointer variable is a pointer of type data type
- The new operator allocates sufficient memory to hold a data object of type data-type and returns the address of the object.
- The data type may be any valid data type.
- The pointer variable holds the address of the memory space allocated.

- Example :- int *p;
  float *q;
  p=new int;
  q=new float;

  p is a pointer of type int and q is a pointer of type float.

  p and q must have already been declared as pointers of appropriate types.

- We can combine the declaration of pointers and their assignments as follows:
  Example :- int *p=new int;
  float *q=new float;
  *p=25;
  *q=7.5

  This statement assigns 25 to the newly created int object and 7.5 to the float object

- We can also initialize the memory using the new operator. This is done as follows.
  Example :- int *p=new int (25);
  float *q=new float(7.5);
- new can also be used to create a memory space for any data type including user-defined type such as arrays, struct and classes.
- **Syntax:-** pointer variable=new data type [size];
  Size specifies no. of elements in an array.
- **Example:-** int * p=new int [10];
  This creates an memory space for an array of 10 integer.
  P[0] refers to first element.
  P[1] refers to second element and so on
- When creating multi-dimensional arrays with new, all the array sizes must be supplied.
  int *p = new int [3][5][4]; //legal
  int *p = new int [3][5][]; //illegal

Delete

- When a delete object is no longer needed, it is destroyed to release the memory space for reuse.
- **Syntax:-** delete pointer-variable;
- The pointer-variable is the pointer that points to a data object created with new.
  Example:- delete p;
- If we want to free a dynamically allocated array we must use the following form of delete
  Syntax:- delete [size] pointer variable;
- The size specifies the no. of elements in the array to be freed.

Advantages of the new operator over malloc() function

- It does not use the sizeof() operator as it automatically computes the size of the data object.
- It automatically returns the correct data type pointer, so does not need to use the typecasting.
- It allows to initialize the data object while creating the memory space for object.

Program

```
#include<iostream.h>
#include<conio.h>
int main()
{

        int *p=new int[5];
        for(int i=0 ; i<5 ; i++)
        {
                cout<<"enter the element";
                cin>>p[i];
        }
        for(int i=0 ; i<5 ; i++)
        {
                cout<<"\n"<<p[i];
        }
        delete []p;
        for(int i=0 ; i<5 ; i++)
        {
                cout<<"\n"<<p[i];

        }
        getch();
        return 0;
}
```
